Aliens Among Us: Gods Who Would Be Men Frank Jordan

A visionary adventure that engages you on a journey of discovering the profound impact that aliens have had throughout our history and into the present day. A Basque archeologist, Eli Izaguirre, searching for the source of his ancestors, discovers that the Sumerian clay tablets found in Mesopotamia contain information on the origin of mankind. The myths of pre-biblical history are revealed as the factual truth when he discovers the mummy of an alien visitor who was killed mining gold in Africa 220,000 years ago. The search for more information leads him to Iam, The Watcher, who is an immortal from the planet Nibiru, and one of the gods who created humans by genetic engineering. The Watcher reveals the history of mankind, and the destiny of the world that both aliens and humans have created by their choices.

Studies by Eli's associates trace the genetic engineering of Homo erectus that was done in Africa to create Neanderthal man, followed by Homo sapiens, and other variations of modern humans. This global adventure also leads to the discovery of shocking realities about the genetics of who our true geniuses are and how and why they were created and have evolved. Anyone curious about the source of humankind and who wishes to penetrate the myths of conventional history and archeology will gain deep insight into the gods of our ancestry and how their influence is still present on Earth. Winner of the Awakening Visions Award for Literary Excellence, Aliens Among us is also being written as a screenplay for motion picture.
